3 steps to safe and hygienic PPE maintenance

Be Dry,
Be Comfortable!

Be Hygienic
and Fresh!

BioClean™

The practical and cost-effective way to maintain standards

Bioclean Products Limited was established in 2006 by a team of highly experienced professionals with complimentary skills in the specific areas of: uniform clothing and PPE, commercial and specialist laundry, industrial and detergent chemistry and cross-contamination control.

The principle objective of "Bioclean products" is to provide frontline emergency service personnel with a practical and cost effective way in which they can maintain their PPE to a standard that ensures safety, cleanliness, functionality and comfort whilst greatly reducing the risk of cross-contamination both in the workplace and the domestic environment.

The secondary objective of "Bioclean products" is to provide the public procurement officer with a cleaning, maintenance and disinfection system that provides and satisfies their legal obligation to ensure that due diligence has been given to the provision of safeguards against identifiable and assessed risks in accordance with the European PPE Directive 89/686/EEC.

The third objective of "Bioclean products" is to achieve both of the above on a neutral or better than neutral "cost over life basis", thus not being a burden to the public purse.

- In all* circumstances our "Ag+ Bioclean antibacterial wash additive" will greatly inhibit the growth of bacteria and reduce the risk of cross contamination.
- In most* circumstances our "Pre-Soak cleaner" will materially extend the useful life of High visibility outerwear.
- In all* circumstances our "471 Re-Proofers" will extend the water repellent properties of High visibility outerwear.
- "Bioclean Products" can quantify and validate that its' products are significantly better and lower cost than any available alternatives.

In addition to the above, the Bioclean system eliminates the need for any lengthy contracts or minimum weekly charges from a third party laundry contractor; it eliminates the incidence of "lost" or "stolen" garments and it enables the wearer to "survive" on an issue of "one item of PPE" (if necessary) as the system is designed to be used at home during a weekend or "off shift" period.

"It is reassuring to know that our police, ambulance, paramedic, fire and community nursing personnel can now be better protected from the unavoidable hygiene and cross-contamination risks that exist when moving between incidents, the workplace and the home"

Note:* When used in accordance with the manufacturers instructions.

471 Pre-Soak Cleaner

- Simply spray (400ml) and leave to soak-in to emulsify and lift most hydrocarbon contaminants, road grime, dirt and blood.
- No need for commercial laundry, 40°C low temperature wash.
- Does not damage reflective tape, fabric or membrane.

Be Clean, Be Seen!

471 Re-proofer

- Simply add (100ml) to the rinse additive tray.
- No need to tumble dry or iron.
- Provides a durable water repellent finish.

Be Dry, Be Comfortable!

AG+ Antibacterial additive

- Simply add (50ml) to your rinse additive tray for each jacket or each wash load (6kg max).
- Test results show 99.9% reduction in bacteria, including MRSA and E-Coli.
- Kills odours, keeps you smelling fresh.
- Continues to provide antibacterial protection until the next wash.
- Ideal as a wash additive for all underwear, base layer and body armour covers to prevent bacterial build up and odours.

Be Hygienic and Fresh!
